Are electron-dense viroplasms really required for
Cauliflower mosaic virus infectivity?

Prof. Mario Keller (Institut de Biologie Moléculaire des Plantes (IBMP), CNRS;
Strasbourg University, France)

Target of rapamycin (TOR) promotes reinitiation after
long ORF translation in the presence of Cauliflower
mosaic viral protein TAV and translation of mRNAs
that harbor short ORFs within their leader regions

Prof. Lyubov Ryabova (Directeur de Recherche, Institut de Biologie Moléculaire
des Plantes (IBMP), CNRS; Strasbourg University, France)
